2024 RoSPA Award
WINNER!

Thor Atkinson Steel Fabrications are again successful recipients of the Gold RoSPA (Royal Society for the Prevention of Accidents) Award.

The RoSPA Health and Safety Awards recognise organisations across all sectors for their commitment to protecting lives and for setting the benchmark for health and safety.

RoSPA Continued...

Thor Atkinson, Managing Director said, *"The business has an unwavering commitment to continuous improvement and excellence in health and safety. We are delighted to receive the award as it once more demonstrates our dedication to the highest safety standards and the well-being of individuals across all parts of the business"*.

RoSPA Awards is one of the most prestigious and recognised schemes in the world with almost 2,000 entries every year, nearly 50 countries and a reach of over 7 million employees.

Thor continued, *"Our gold award is a testament to a brilliant team performance across the business and in particular our hard work, innovation, creativity and our resolve to continually drive-up standards, protecting people, both in and outside of the workplace. Well done everyone"*.

Projects

Replacement Conveyor Section

Following a recent inspection at Cemex's site on Angerstein Wharf, London, the GTU tower and a section of the ship-to-shore conveyor were identified as needing to be replaced. We were commissioned to design, fabricate and install the replacement tower and conveyor section. These were manufactured in our workshop and transported to site where they were pre-assembled by our fitters.

While the pre-assembly was taking place, the old tower and the conveyor section were carefully removed to make way for the replacements. Our demolition company, N&R Contractors were brought in to work alongside our fitters, demolishing the conveyor section and GTU tower as soon as they were lifted out. This minimised the impact to the customer. The new GTU tower was installed on a new pre cast base followed by the replacement conveyor section.

Projects

All works were completed quickly to minimise production downtime. The conveyor was only out of action for 7 days allowing the customer to continue to run the plant as normal from their stockpile. The customer was very pleased with the outcome and the project demonstrates a brilliant team effort across the business.

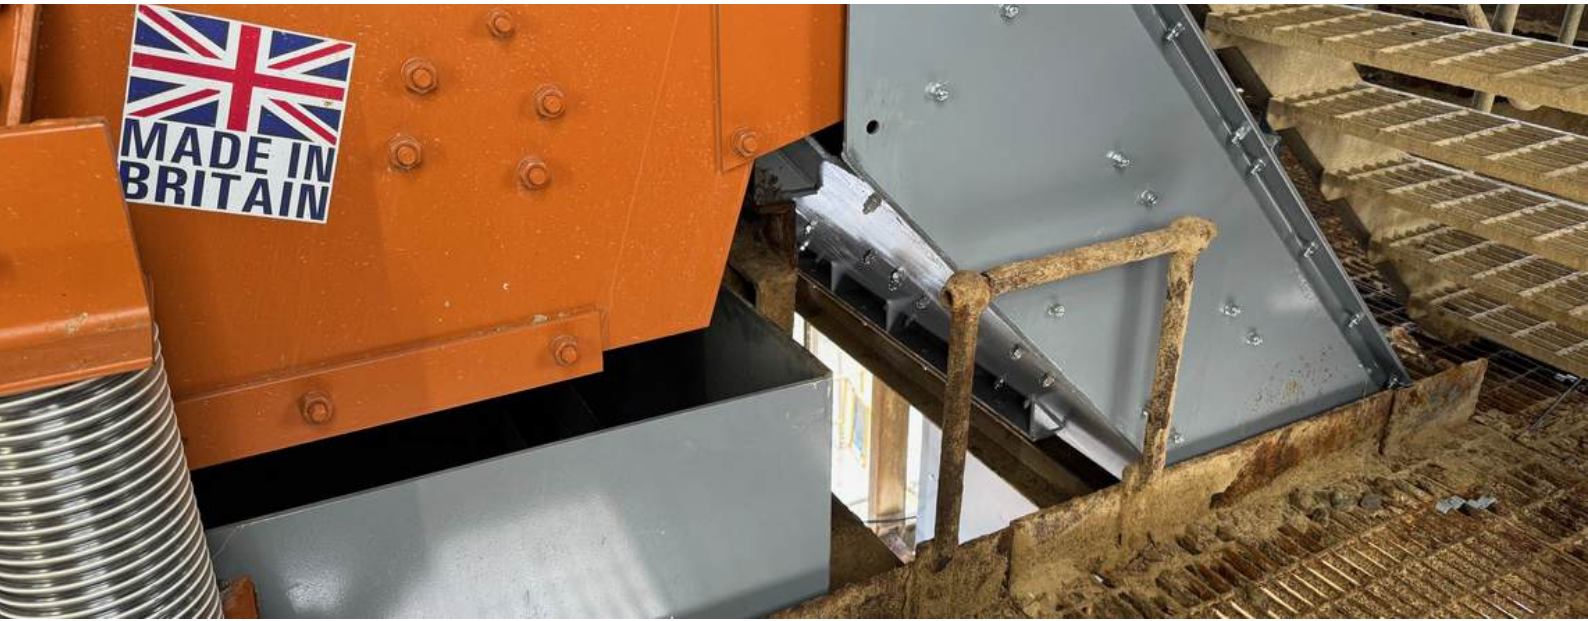

Projects

Screen, Chutes & Underpan

We were recently asked to design, fabricate and install a new underpan and discharge chutes at our customer's site in London. The screen, supplied by the customer was also installed by us.

In the Workshop

The workshop continues to perform well, producing high quality work for our customers across the UK. Pictured below are some examples:

Large wash plant underpan

Sludge buffer tank

MPI testing of lifting lugs on large chutes

Demolition Update

N&R Contractors continue to be busy on a wide range of projects across the UK. These have included the removal of a redundant sand plant in Staffordshire, the demolition of an asphalt plant in Wales and the careful demolition of a quarry storage building that contained asbestos in Derbyshire. We are also delighted that we will soon be starting a major demolition and site clearance project at a quarry in the Midlands and an asphalt plant scheduled for removal in Glasgow.

Colin Scott, Operations Director N&R

Sand plant demolition completed, Staffordshire

Reminders ...

Timesheets

Please submit your
timesheets to

wages@thoratkinson.co.uk

every Monday before
12 noon.

Vehicle Inspection

As from 30th
September, vehicle
inspection sheets need
to be submitted with
your timesheets

People

We wish to welcome the following new colleagues to Thor Atkinson Steel Fabrications:

Vladislav Yaroshenko
Duddy Connor
Alfie Aspinall
Tia Lomas
Robert Wood

Steel Fabricator
Design Engineer
Apprentice Welder
Apprentice Welder
Transport Manager

Macmillan Coffee Morning

Coffee morning at head office to raise money for the Macmillan Cancer Support charity. Many thanks to everyone that donated and contributed cake.
