Investing in new machinery to expand our contract crushing services

Managing Director's Summary

Reflecting our ongoing commitment to safety, sustainability and quality, I am again delighted that we have successfully achieved ISOQAR re-certification (page 2). This achievement strengthens customer confidence in our operations and ensures we maintain high standards across all areas of the business. Thank you to everyone who contributed to reaching this important milestone.

Additionally, we continue to invest in technology and equipment. This includes new workshop technology (page 3) and the recent addition of a new hiab truck (page 4) to our fleet. Over the past 12 months, we've also significantly expanded our contract crushing services by investing in new machinery (pictured above) and thereby increasing our capacity for crushing projects of all sizes.

Our on-going investment ensures we can consistently deliver the level of service, reliability, and quality required by our valued customers.

Thor Atkinson, Managing Director

Compliance Success

Thor Atkinson Steel Fabrications has successfully achieved re-certification to four International and European Standards demonstrating our continued commitment to preventing harm, protecting the planet, creating and delivering value, and the assurance of our structural steel.

ISO 45001 certification demonstrates our continued commitment to safe, healthy, and sustainable work whilst reducing risks and strengthening our regulatory and industry compliance.

ISO 14001 certification demonstrates our continued commitment to sustainability, to reducing the environmental impact of our operations, and protecting the planet.

ISO 9001 certification demonstrates our continued commitment to meeting customer requirements, to competent, empowered and engaged staff, and to creating and delivering value.

BS EN 1090 certification demonstrates our continued commitment to the conformity and safety of our structural steel.

In concluding the re-certification audit, on behalf of ISOQAR, the auditor said; *“I was impressed by the passion ... it’s a really good business”*.

New Press Brake Ready for Commissioning

We're thrilled to announce the arrival of our new press brake, which has now been delivered to our workshop and is awaiting full commissioning. This state-of-the-art Morgan Rushworth 200 tonne x 3.1 metre CNC Press Brake was supplied by the excellent team at Bison Machinery who will continue to carry out its maintenance. This machine replaces our previous press brake and brings enhanced folding capacity, greater precision, and improved efficiency—significantly boosting our in-house fabrication capabilities.

Thor Atkinson Takes Delivery of New Hiab Truck

Thor Atkinson Steel Fabrications has recently taken delivery of a new hiab truck. This powerful addition to our fleet boosts our capabilities and will allow us to enhance the services we offer to our customers. Together with our low loader, the hiab enables us to expand our services to include transportation, lift-and-shift solutions, and on-site assembly support.

Cone Crusher Replacement Project

We recently installed replacement Sandvik cone crushers at our customer's site in Greenwich, London. As part of the project, we also designed, fabricated, and installed replacement feed chutes and cone crusher access platforms. Due to corrosion of the existing flooring, we also replaced the building's flooring.

N&R Contactors remain very busy, with demolition work continuing at the Bayston Hill quarry plant.

Over the past few months, we've successfully completed several projects, including a recycling plant in Birmingham, along with multiple asphalt and concrete plants.

Looking ahead, our forward orders include:

- 3 asphalt plants
- 7 concrete plants
- A full rock quarry plant
- A sand and gravel plant

This strong pipeline of work puts us in a solid position as we move towards the end of the year. From a broader perspective, scrap prices have been affected by ongoing global uncertainty around tariffs, but they appear to have stabilised for now.
